

November: 20,000 leaves under the sky

Weather Notes

A mild, windy and wet month. The month had 25 'wet' days with rainfall spread throughout the month. A deep area of low pressure occurred on the 3rd with a pressure of 980.7mb and another windy spell on the 24th resulted in a tree coming down. High pressure and clear skies on the 8th allowed a ground frost and fog to develop. The last week was cooler with some bright and chilly mornings.

Highest temperature: 15.5°C, 1st (warmest November day since 1997).

Lowest temperature: 1.4°C, 9th (first frost-free November since 1994).

Average temperature: 8.8°C (daily min. + max. / 2) Normally 6.3°C.

Monthly rainfall: 83.3mm (154% of November average 54.1mm and wettest November since 2002).

Wind: An overwhelmingly westerly month with frequent depressions and only 2 days of 'settled' anticyclonic weather.
